

Environmental policy

The company's intention is to continue to satisfy the demands of customers, but at the same time improve the effects of our activities on the environment during all phases and supporting processes, starting from the production of the product to the shipment of the products. During the entire process of preparation, production of products up to their dispatch, the company monitors the process from the point of view of environmental impacts and constantly applies procedures for reduction the impact of their activities on the environment.

Therefore, the company declares a policy of continuous and systematic improvement of the environmental management system (EMS) meeting the requirements of the ISO 14001 standard.

As part of this, the company will:

- Comply with mandatory environmental requirements
- Introduction of the ISO 14001 environmental management system, effective application and provision of resources necessary to maintain its sustainability
- Optimal use of energy, raw materials and natural resources
- Compliance with environmental criteria in connection with the use of raw materials and auxiliary materials, control of the unfavorable effects of these materials
- Establish appropriate EMS goals to ensure a clean environment and a healthy future, adopt programs for their fulfillment and secure the necessary resources.
- Prevention of pollution, reduction of waste generation and separation at the source in order to achieve the maximum rate of recycling in accordance with the principles of the circular economy
- Define risks and opportunities related to environmental protection and take effective measures to eliminate them
- Raising the awareness of employees and suppliers working in our operations through environmental training, informing them about important environmental aspects and environmental risks and creating motivation
- Taking into account the environmental factor in new investments and projects
- Communicate environmental principles and principles to our customers and suppliers and require them to perform services and use products with a positive approach to environmental protection

In order to reduce our use of natural resources and the production of waste to the lowest possible level, we strive to develop new methods to prevent environmental pollution with environmentally friendly projects and to maintain the sustainability of the systems built as part of the environmental protection policy.

Every employee and persons working on behalf of SAG Slovakia s.r.o. they have individual responsibility, within the scope of their competencies, for fulfilling the requirements of our environmental policy

Quality policy

The company SAG Slovakia s.r.o. Chocholná-Velčice as a manufacturer of tanks and special constructions made of aluminum and steel with a focus on the supply of components for transport equipment is aware of her responsibility for the quality of her products and her commitment to her customers. For this reason, SAG Slovakia s.r.o. has implemented and successfully maintains a quality management system in accordance with ISO 9001.

The company's intention is to continue to satisfy customer requirements, but also to improve relations with the surrounding environment, create optimal conditions for work in their operations and increase the efficiency of the company's management.

Therefore, the company announces a policy of continuous and systematic improvement of the quality management system (QMS-SMK) meeting the requirements of the ISO 9001 standards.

As part of this, the company will:

- Gradually restructure the company's management, streamline the defined processes of SMK and improve the work of management, other employees and other interested partners.
- Evaluate customer requirements and look for effective ways to increase customer satisfaction.
- Increase product safety.
- To set appropriate goals of the SMK, programs for their fulfillment and to provide the necessary resources for that.

In connection with the subject of SMK:

- monitor and implement the requirements of legal and other standards and regulations into SMK processes.
- assess the risks associated with the implementation of products, identify hazards and assess risks related to occupational safety and environmental protection and take effective measures to eliminate them.

Put increased emphasis:

- for the education of employees, the growth of their professional competence and awareness of the effects of their work on the safety of equipment for which we supply components, safety and health protection at work and environmental protection.
- Improving communication not only within the company, but also with customers, suppliers and the environment at the level of state and regional administration, for the field of environmental protection and public health.

Every employee and persons working on behalf of SAG Slovakia s.r.o. they have individual responsibility, within the scope of their competencies, for fulfilling the requirements of our SMK policy.
